					The config files are in the same folder as the hibernate.cfg.xml. You need to manually upload the files to this folder. Changes to the config file are immediately online.					
					Config file name	om_ldap.cfg				
					 If you enable "Add Domain to username" the value of the field "domain" is added to each login that the user enters in the login box. This is useful if the Login in the Ldap is stored including the domain name. Example: User enters "hans" domain is specified as "localhost.com", login that is verified against Ldap is: hans@localhost.com Add Domain to username Image: Domain Image: Communication of the stored including the domain name. Example: User enters "hans" domain is specified as "localhost.com", login that is verified against Ldap is: hans@localhost.com
