

ISP Sniffer

ISP Sniffer is a powerful network monitoring tool that provides detailed analysis of network traffic. It features a user-friendly interface with multiple data visualization options, including pie charts, bar graphs, and line graphs. The software is designed to capture and analyze network data in real-time, allowing users to identify patterns and anomalies in their network usage.

The software offers a comprehensive set of features for network analysis. It includes a detailed log of network activity, which can be filtered and sorted according to user preferences. The interface is highly customizable, allowing users to tailor the display to their specific needs. Additionally, the software provides a range of reporting options, enabling users to generate detailed reports on their network performance. The software is compatible with a wide range of operating systems and network configurations, making it a versatile tool for network monitoring.

ISP Sniffer is a powerful tool for network monitoring and analysis. It provides a comprehensive set of features for capturing and analyzing network traffic. The software is designed to be easy to use, with a clear and intuitive interface. It offers a range of data visualization options, including pie charts, bar graphs, and line graphs. The software is compatible with a wide range of operating systems and network configurations, making it a versatile tool for network monitoring.
