Resource Record Type	? ×
Select a resource record type:	
Renamed Mailbox (MR) Responsible Person (RP)	
Route Through (RT)	
Service Location (SRV) Signature (SIG)	
Text (TXT)	•
Description	
Service (SRV) record. Allows administrators to use several servers for a single DNS domain, to easily move a TCP/IP service from one host to another host with administration, and to designate some service provider hosts as primary servers for a service and other hosts as backups. DNS clients that use a SRV-type query ask for a specific TCP/IP service and protocol mapped to a specific DNS domain and receive the names of any available servers. (RFC 2052	2)
